

OPEN WINDOW

A calm companion that welcomes you back

Product vision storyboard · working title

Born from what helped one person lose 27
kg.
Shared freely so others can try it for
themselves.

17 JULY 2026

27 kg

Six months paid • six weeks free • 27 kg lost

The product starts with a result, not a feature list

Simple helped make a set of ordinary behaviours visible: when to eat, what was eaten, how much was drunk, movement and weight.

The opportunity

Keep the useful daily loop. Remove the commercial noise. Make returning after a gap feel normal.

The best products make one state immediately legible

Three nearby products reveal useful patterns—and useful things to leave behind.

Simple

One daily dashboard

BORROW

Food, hydration, movement and weight live together.

Leave: upgrade prompts, content density and coaching dependency.

Zero

The timer is the hero

BORROW

Fasting state and progress are unmistakable.

Leave: streak pressure, social proof and performance framing.

Easy Fast

Glanceable and focused

BORROW

Custom goals, Live Activity and full history feel core.

Leave: fasting as the entire identity of the product.

This is an invitation, not a business model

“This worked for me. You are welcome to try it for yourself.”

Always free

No premium tier, trials or feature gates.

Private by default

Health data serves the user—not advertising.

Honest estimates

Food and fasting insights show uncertainty.

No shame

Missing days create a catch-up option, not a failure state.

OPEN
WINDOW

The visual language should lower the pulse

Warm, spacious and recognisably human—without looking childish or clinical.

Warm ivory

Deep ink

Sage

Soft blue

Apricot

Voice

A few days missing? No problem.

Direct • neutral • encouraging • never chirpy

Interface

Large actions. Few decisions. Rounded surfaces. Trends before daily noise.

One calm place for the shape of today

Journey 1 • Set the goal, then glance

Choose 12 hours or more. The Lock Screen keeps the fast present.

Journey 2 • Log fast, correct easily

Photo, words or a recent meal. Tea and coffee count toward hydration.

Journey 3 • Return without penalty

Backdate entries, preview inferred fasts and leave honest gaps unknown.

Journey 4 • Apple Health holds the record

Read weight and steps with permission. Reflect on trends, not a perfect day.

The product is a loop, not a dashboard

Each visit should end with more clarity and less work left to do.

Catch-up can re-enter the loop at any point.

A health app should survive being forgotten

Real life creates gaps. The product should preserve trust when the record is incomplete.

What many apps imply

You broke the streak.
Your history is incomplete.
Start again today.

What Open Window says

Life happened.
Catch up if it helps.
Leave unknowns honest.

Build the habit loop before the clever parts

The first usable version can prove the product without solving photo nutrition perfectly.

1

Fasting

Goal, timer, history, Live Activity

2

Daily log

Text food, hydration, local data

3

Recovery

Backdating and history reconstruction

4

Progress

HealthKit weight, steps and reflection

Then add photo analysis, reusable meals and vegan-aware feedback.

The storyboard makes five decisions visible

These are the choices to validate before production code shapes the product.

- 01 Does Open Window feel like the right identity?
- 02 Is Today calm enough—and useful enough?
- 03 Should a live fast start automatically from the last meal?
- 04 When should catch-up suggest rebuilding history?
- 05 Which nutrition values deserve daily attention?

REVIEW

**If it feels calm enough to return to,
it has a chance to help.**

Open Window

This worked for me. You are welcome to try it for yourself.
